ABSTRACTED-PUB-NO: RU 2086217C

BASIC-ABSTRACT:

A composition for protecting corneal epithelium during the emergency eye surgery consists of a 0.5-10 wt.% solution of polyethylene oxide in a balanced acetate-nitrate or phosphate buffer of pH 6.8-7.8. The acetate-nitrate buffer contains (in g/l): sodium chloride 6.15, sodium acetate 3.9, sodium nitrate 1.7 and water the rest, and phosphate buffer contains (in g/l): sodium chloride 8.5; sodium hydrogen phosphate 0.24, sodium dihydrogen phosphate 0.04 and water the rest.

USE - In ophthalmology.

ADVANTAGE - The composition is safer and more effective.
